

ABSTRACT

A system, method and apparatus for management of clinical studies to facilitate the tracking of the studies by personnel involved in the study, such as managers, coordinators, and vendors, wherever they are located, as well as placing orders, and receiving financial information, the invention being suitable for managing clinical trial documentation in connection with the pharmaceutical industry, and for facilitating communications and delivery of clinical data and documentation between clients who initiate a clinical study and a vendor who may, for example, provide data capture, data packaging, and submitting the study documentation to the appropriate authority, such as, for example, the FDA or WHO.
